## High Priority

The numbers here correspond to the issue numbers on our github issue tracker

#35 Events don't always show up upon app launch even though they should be fetched from the database, this is especially common after the user signs out and signs back in again

#48 Hosted events don't appear under personal tab

## Medium Priority

#37 Searching for locations using google search bar doesn't reliably find all local businesses or locations

#49 Refreshing page whilst on list view tab will cause all available events to be shown regardless of the current search query

#47 Event photos take a long time to appear after uploading an event, default photos are shown instead for both the thumbnail and event page photos

#50 Changing search range in settings tab doesn't change which events are displayed in list view tab if a search query is currently active

## Low Priority

- #39 Transition between tabs isn't smooth due to search bar
- #51 Comments disappeared from event page for no apparent reason, (this has only occurred once so far hence the low priority)
